'ओओन'भाठी औष्णिक वीज केंद्र घातक!

संजय रामगिरवार

चंद्रपूर, १५ सप्टेंबर

अंटार्क्टिकावरील ओझोनला पडलेल्या छिद्राने अवध्या जगाचे लक्ष वेधले. कोळशावर चालणारे वीज केंद्र सर्वात जास्त 'नायट्रिक ऑक्साईड' सोडतात आणि हे ओझोनसाठी घातक आहे. चंद्रपूर आणि परिसरात औष्णिक वीज केंद्रांची संख्या अधिक आहे. त्यामुळे येथे 'नायट्रिक ऑक्साईड' कमाल पातळीवर म्हणजे, ११ पीपीबी आहे. गेल्या काही महिन्यांपर्यंत तर ओझान वापुची नोंदही येथे घेतली जात नव्हती. सुदैवाने आता ती घेतली जात असून, सध्या ती ४ पीपीबी आहे. कमीत कमी ३ आणि जास्तीत जास्त ५ पीपीबी असायला हवी. हिवाळ्यात मात्र, ती ५ पीपीबीपर्यंत पोहोचते. सध्या धोका नसला, तरी भविष्यात मात्र या परिसरासाठी हा चेंतेचा विषय निश्चत आहे.

ओझोन म्हणजे नेमके काय, त्यामुळे तापमानातील बदल, त्याचे पर्यावरणावरील परिणाम, भविष्यात उद्भवणाऱ्या समस्या याविषयी या क्षेत्रातील डॉ. योगेश दुधपचारे, कला, वाणिज्य महाविद्यालयाच्या रसायनशास्त्र विभागाचे प्रमुख डॉ. टी. बी. कोसे यांच्यासारख्या काही तज्ज्ञ मंडळींशी चर्चा केल्यानंतर या वायुचे महत्त्व आणि त्याकडे होणारे दुर्लक्ष समोर आले. खरे तर, १९८५ नंतर कुठे जगाने याकडे गांभीयनि बघायला सुरूवात केली. १६ सप्टेंबर १९८७ ला याविषयीचा मसुदा जगासमोर स्वाक्षरीला आला आणि १९९९ पर्यंत आपल्या देशातील 'नायट्रिस ऑक्साईड'चे प्रमाण ५० टक्क्यांपर्यंत कमी करण्याचा करार झाला. त्यामुळेच आपण १६ सप्टेंबरला ओझोन दिन पाळतो.

ओझोन हा वायू ऑक्सिजनच्या तीन अणुंपासून बनलेला असतो. वातावरणातून येणारी अल्टाव्हायोलेट किरण ऑक्सिजनच्या अणंना विभक्त करीत असते. त्यामुळे ऑक्सिजनचे अण् विखंडित होतात. परंतु, त्यातील काही एकटे अणू ऑक्सिजनच्या अणुंना जाऊन मिळतात आणि ओझोनची निर्मिती होते. पुन्हा याच किरणांमुळे ओझोनचे विभक्तीकरण होते आणि ओझोन-ऑक्सिजन-ओझोन'ची ही प्रक्रिया सतत सुरू राहते. ओझोनची विष्ववृत्तावरील जाडी कमी, तर ध्वाकडील जास्त असते. इतकेच नव्हे, तर विष्ववन्तावर जास्त उंचीवर आणि धंवांकडे कमी उंचीवर हा वायु असतो. या वायुंचे प्रमाण आर्टिक परिसरात मार्च-एप्रिल महिन्यात सर्वात जास्त पाहावयास मिळते आणि सप्टेंबर-ऑक्टोबर महिन्यात अंटाक्टिका खंडावर सर्वात कमी पाहावयास मिळते. हिच घटना जगात 'ओझोन होल' नावाने ओळखली जाते.

ओझोन जर समुद्रसपाटीजवळ असेल, तर एका प्रदुषकासारखा कार्य करतो आणि आपल्पा श्वसन संस्थेवर परिणाम टाकतो. हा वायू उंच आकाशात साधारत: २५ ते ३५ किमी उंचीवर आढळतो. या उंचीवरील उपस्थितीमुळे हवेच्या या आवरणाचे नावच ओझोनावरण असे पडले आहे. या उंचीवर आकाशाकडून येणाऱ्या अल्ट्राव्हायोलेट किरणांना ओझोन 'फिल्टर' आणि जमिनीकडे

सध्या धोका नसला, तरी चिंतेचा विषय

पाठवतो. अल्ट्राव्हायोलेट-क हे प्रारण आपल्यासाठी सर्वाधिक धोकादायक आहे आणि याच प्रारणातील ९३ ते ९९ टक्के सूर्यकिरण गाळली जातात. अन्यथा जिमनीवरील तापमानात प्रचंड वाढ होऊ शकली असती. त्यामुळे अंटाक्टिंका खंडावरील बर्फ वितळले असते. प्राण्यांना अनेक अपाय होऊ शकले असते. विशेषतः मानवाला या किरणांपासून कातडीचा कर्करोग होऊ शकला असता आणि याची सर्वाधिक भिती आस्ट्रेलिया तसेच न्यूझिलंडमधील लोकांना पोहचली असती. त्वचा जळू शकली असती, दृष्टीदोष निर्माण होऊ शकले असते आणि इतकेच नव्हे, तर कायमची जुनूकिय हाणी होऊ शकली असती. यामुळे ओझीन वायुचे महत्त्व अनन्यसाधारण आहे, हे स्पष्ट होते.

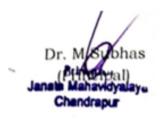

पण या वायुच्या वातावरणातील उपस्थितीमुळे तिखट वास आणि डोकेदुखी सुरू होते, डोळे चुरचुरू लागतात आणि इतकेच नव्हे, तर घशात खाजवल्यासारखे होते. वातावरणात कमी प्रमाणात असतानाही याचा प्लॉस्टिकसारख्या वस्तू तसेच फुफ्फुसावर परिणाम होऊ शकतो. या वायुचे आणखी एक वैशिष्ट म्हणजे, हा आपल्या सभोवताल चुंबिकय क्षेत्र निर्माण होऊ देत नाही किंवा कमजोर करतो म्हणूनच याला 'डाईमॅग्नेटिक' असेही संबोधले जाते.

ओझोन संरक्षण सर्वांची जबाबदारी : डॉ. दुधपचारे

ओझोनचे संरक्षण ही केवळ शासनाची जबाबदारी आहे, असे नाही, तर आपण सारेच ओझोनच्या रक्षणासाठी बरेच काही करू शकतो. एअर कन्डीशनर्स, परफ्युम्स, रूम फ्रेशनर्स, फ्रिज, कपड्याचे ड्राय क्लिनिंग, फोमची निर्मिती, आग नियंत्रक, बर्फ निर्मिती, कॉम्प्रेसर्स आदींतील बऱ्याच गोर्प्टीतून मोठ्या प्रमाणात ओझोनचा लय करणारे वायू उपयोगात आणले जातात. त्यामुळे या गोप्टी टाळता आल्या किंवा त्यासाठी नवीन तंत्रज्ञानावर आधारित 'ओझोन फ्रेंडली' वस्तू खरेदी

करता आल्या, तर ते एका अर्थाने ओझोनचे रक्षणच होईल, असे मत चंद्रपूर येथील जनता महाविद्यालयाचे भुगोल विभागप्रमुख तथा ग्रीन प्लॅनेट सोसायटीचे सदस्य डॉ. योगेश दुधपचारे यांनी तभाकडे व्यक्त केले.
